

Module 6: Video 5 Transcript, Multisensory Learning

Sound

You will need some kind of sound system for your sensory room and a company could install a great fixed system for you.

These days many people will opt for a portable sound but don't buy cheap, get one that costs around £150 upwards.

That may sound costly but learners with a hearing loss need a good quality sound. This kind of speaker is both portable and connected to a tablet, a computer or a phone via a cable or Bluetooth for the ultimate flexibility.
